-- eGistics Unveils Connector for OPEX Scanners --

DALLAS, December 5, 2011 -- eGistics, Inc. (www.egisticsinc.com), a leading provider of cloud-based document management solutions, today announced the availability of a preconfigured connector between its CloudDocs platform and scanners from OPEX Corporation, a recognized global leader in high-speed mailroom automation and document imaging solutions.

The connector enables OPEX customers to more easily integrate the CloudDocs document management platform with their OPEX scanners. The connector functions “out of the box” with no additional configuration or setup required, allowing OPEX native outputs to be quickly and seamlessly loaded into the CloudDocs repository. CloudDocs is designed to manage structured, electronic documents for departmental and enterprise business processes such as accounts payable, human resources, contract management, audit, branch management, loan origination, and more.

The connector extends the document management capabilities of OPEX solutions, providing users with a cost-effective alternative for storing, managing, retrieving and protecting business content. This helps OPEX users realize additional value from their OPEX equipment, while accelerating return on investment. The connector also eliminates the development costs associated with integrating OPEX scanners with CloudDocs, which in turn speeds deployment and accelerates ROI.

"Simplifying the management of document-driven business processes has long been a goal of users. Offering a connector between CloudDocs and the OPEX scanning platform enables OPEX users to reduce the complexity and cost of integrating the technologies, while providing them with a cost-effective alternative for storing and managing content," said eGistics Chairman and CEO Bob Lund.

"The OPEX scanner product line is uniquely designed to capture a wide mix of real world documents across multiple business processes with greater efficiency," said Mark Smith, Director of Strategic Alliances at OPEX. "By offering a preconfigured connector to our unique capture platform, eGistics is ‘cloud-enabling’ the AS7200 and DS2200 and further helping users maximize their document management investments."

About OPEX Corporation

OPEX is a recognized global technology leader in high-speed mailroom automation and document imaging. Since 1973, OPEX systems have provided performance enhancing workflow solutions and cost-effective results to thousands of organizations around the world.
